

Wilfley Welcomes Trevor Hunt

As the Wilfley Team continues to expand we are happy to welcome another much needed member. Trevor Hunt is our new Senior Applications Engineer and will be supporting the sales managers and representatives in pump orders and project management.

Trevor brings solid engineering and customer experience. A graduate of California Polytechnic University, he was a member of the Mechanical Engineering Honor Society. His passion for engineering was further demonstrated through his commitment to tutor students in math, science and engineering.

Trevor's career started at Kobelco EDTI Compressors as Project Engineer where he worked on the design of compressor system piping and vessels, coordinated projects and worked directly with customers. He moved to FS-Elliott as the Field Sales and Application Engineer for the Asia Pacific. There his high level of customer interaction was put to use in gathering customer specifications, thorough negotiations, solid proposals and follow through with project engineers. He comes to us from his most recent position as Sales Engineer for the USA Western Region of MP Systems where he supported existing customers with proposals and production oversight. He was also instrumental in developing new customers through cold calls and trade show representation.

Trevor lives in Broomfield, CO with his wife Dayna. In his free time Trevor takes advantage of the great Colorado outdoors by rock climbing, golfing and hiking.
