

## Wilfley Pump Rebuild Program

Wilfley has been rebuilding pumps for our customers since the company was established in 1919. This affordable service, known as the Pump Rebuild Program, includes a full pump inspection and rebuild with new OEM parts. Rebuilt pumps are treated with the same priority as new pumps and are returned to the customer in a timely manner.

### How the program works:

1. Contact Wilfley customer service to obtain a return authorization number
2. Complete the Wilfley Return Goods Form and sign the decontamination certificate
3. Include the form and a copy of the MSDS for the pumped liquid with your shipment
4. Follow the shipping instructions on the form

**Pumps must be fully decontaminated and must have their case, impeller, and case plate removed prior to shipment. Failure to do so will result in the shipment being rejected by Wilfley.**

Returned pumps will be fully inspected by Wilfley and you will receive a proposal outlining the parts that need replacing and a schedule for completion. Once you agree to the proposal, the pump will be reassembled with new OEM parts and painted. A full range of optional performance tests are also available to meet your needs. All of the new OEM parts are furnished to you with a new pump warranty.

**Contact your local Wilfley representative to learn about pricing**
